

Status of Port Community System in the port of Ploče

25. August 2016. Rijeka

Darko Plećaš
Head of IT Department

Content

- Development of local PCS by Port of Ploče Authority
- Integration with other systems
- Development of interface to share data from PCS Ploče with other ports's system through web interface
- PCS integration with Entrance terminal Control and management system , Terminal operating system and other systems
- Integration with Croatian NSW CIMIS

Development of PCS (1/4)

- There is no standard PCS – purpose is the same.
- PCS Ploče is tailor made system which meets the requirements and specifics of the port community Ploče
- Depending of port needs, PCS systems are different regarding Structure and architecture
- Development of PCS Ploče is ongoing

Development of PCS (2/4)

- Better message exchange between port users to have reliable and on time information
- Better planning in port of Ploče
- Need for message exchange in order to have quality information so that processes in logistic chain run smoothly
- Final is to improve competitiveness of the port through smooth and quick movement of the cargo

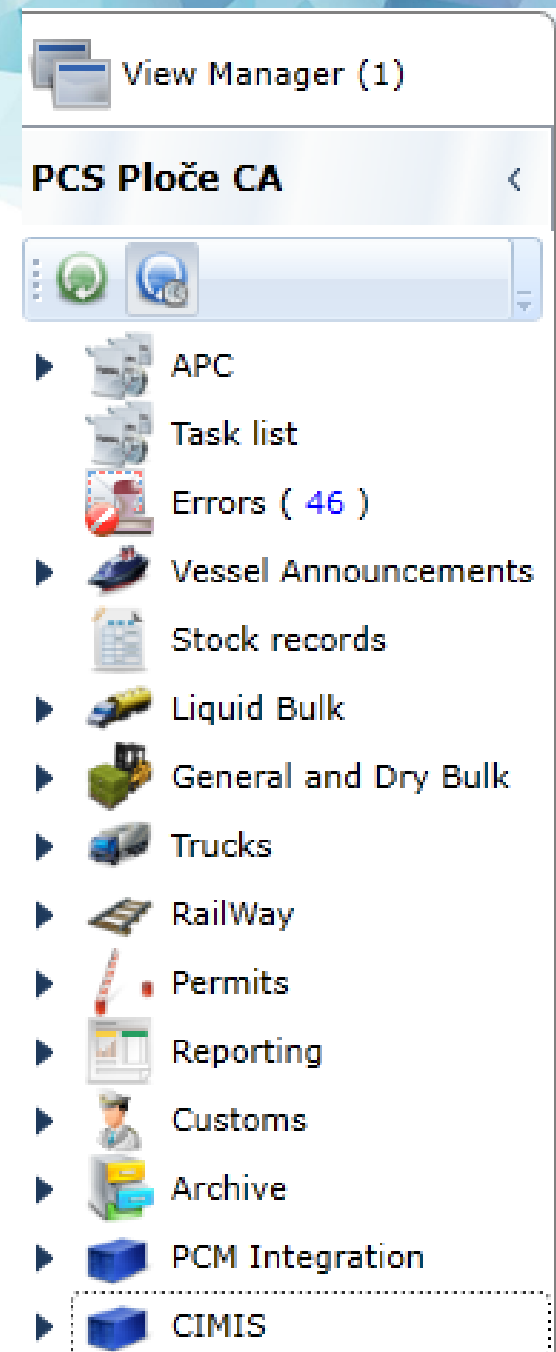

Development of PCS (3/4)

- Exchange of messages with attachments
- Exchange based on XML and UN/EDIFACT;
- Open system, used by all users through defined business process following defined business rules
- Minimal requirements for users without big investments

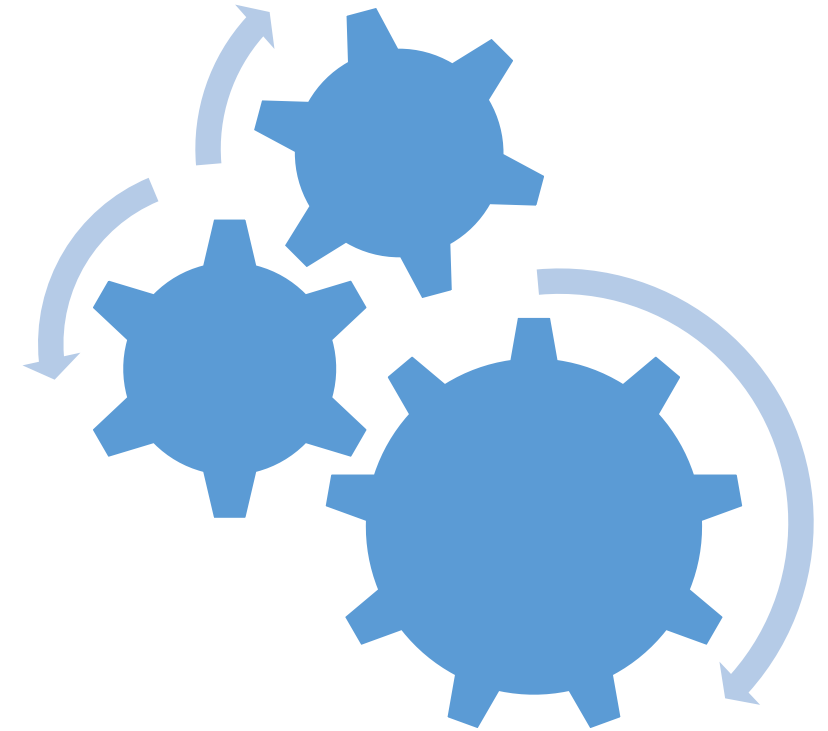

Development of PCS (4/4)

- Ship arrival and departure; covered by CIMIS now
- Liquid cargo
- General and dry bulk cargo
- Containers
- Railway
- Customs
- Gate in/out procedures
- ...

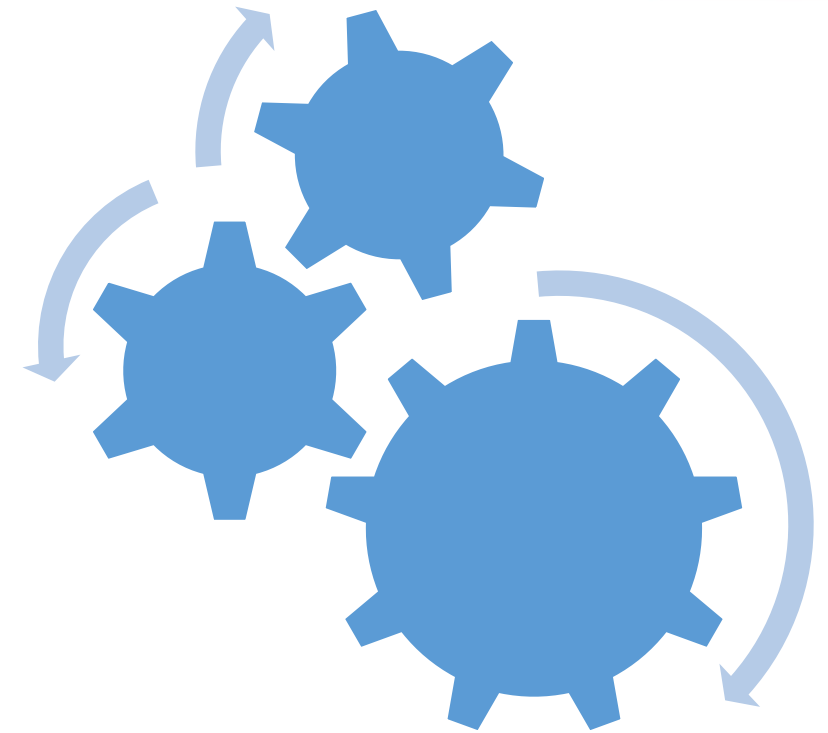

PCS Integration (1/5)

- Why we need integration and talk about integration?
- Integration is needed to share data in automatic way if we want to follow single window concept
- There are many systems and "single windows", but there is no synergy and they are for them self
- In the end, from user's point of view, user has multiple single windows 😊

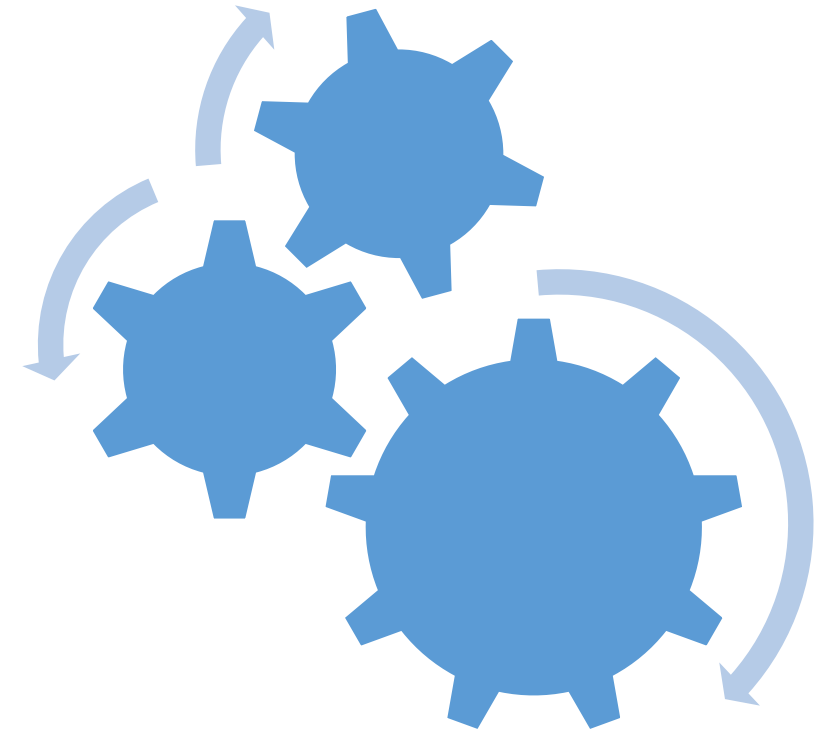

PCS Integration (2/5)

- PCS is about to be integrated with Terminal operating system
- In PCS system we will have all data related to container movements following needed business processes to share with TOS; Integration is not still in production
- PCS Ploče has tasted the exchange of data with CIMIS NSW
- The structure of data that has to be exchanged will be defined by Croatian Ministry of Sea, Transport and Infrastructure

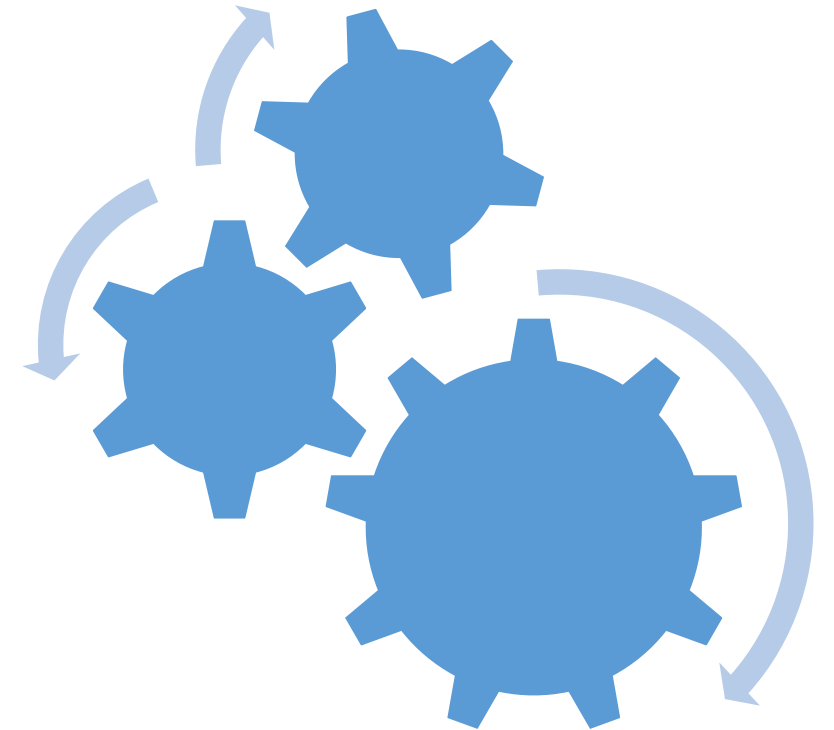

PCS Integration (3/5)

- Development of the new Entrance terminal
 - Control and management system
 - PCS is mandatory for exchange of messages between many subsystems and equipment
 - It is crucial because vehicles must enter to port
 - Entrance terminal will be based on automatic procedures
 - It covered all gate in/out procedures
 - All port users must be part of PCS system to announce vehicles

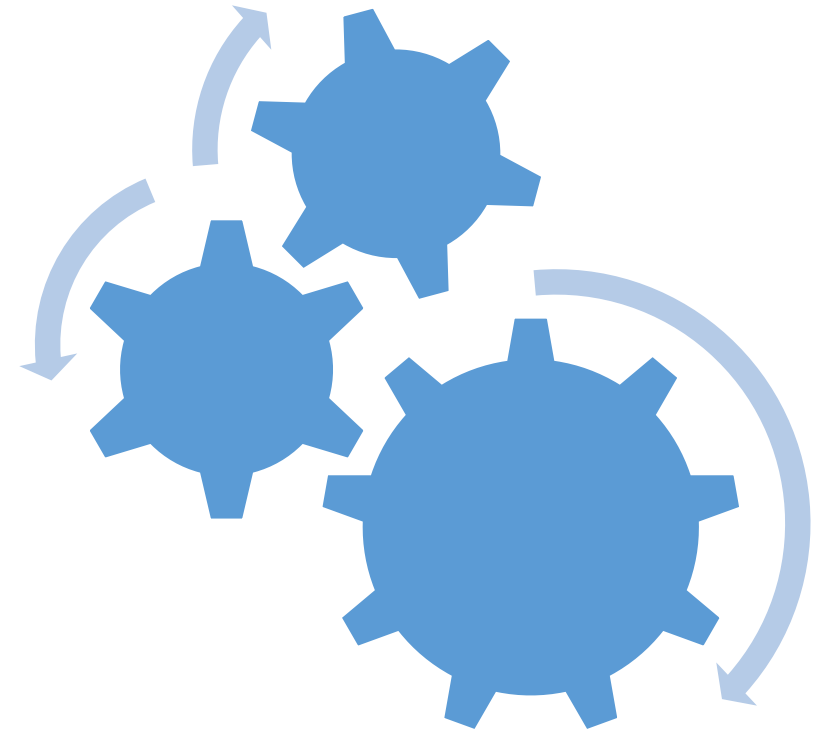

PCS Integration (4/5)

- Development of the new Entrance terminal
 - Gate in/Gate out port entrance security system with parking and booking space management
 - RFID, Video surveillance, ADR and plate recognition. **Vehicle announcements**
 - Used by Port security for entering data about trucks and drivers.
 - Security will be more covered with PCS
 - Data regarding gate in/out procedures will be shared with customs

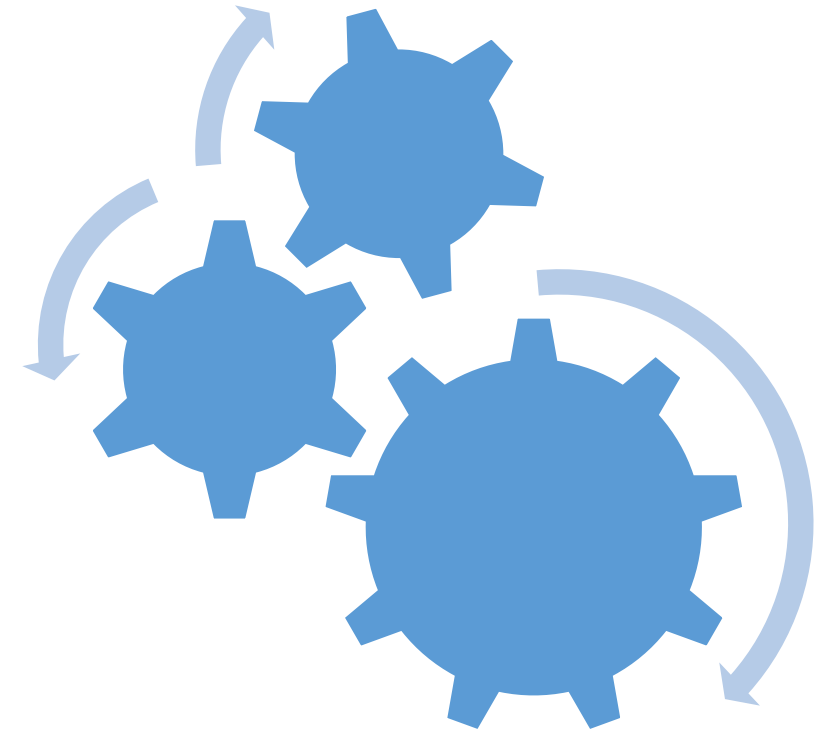

PCS Integration (5/5)

- Development of new Entrance terminal and development of many automated procedures, needs for better control and exchange of information has result with integration between **PCS and SAP system**
- Integration will be done next month and will result that process will be started in SAP and data will be exchanged with the PCS Ploče

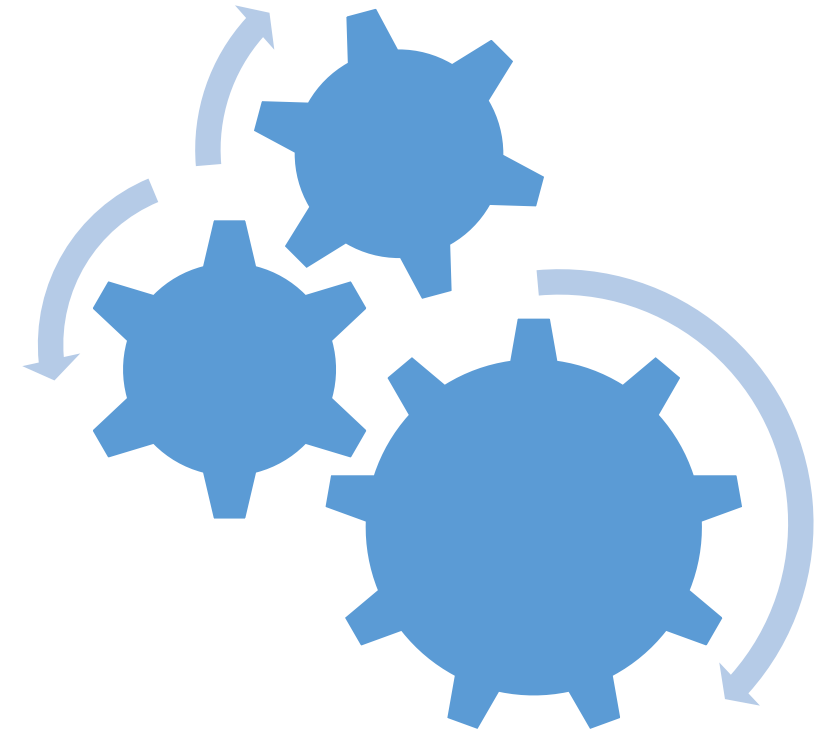

Web interface to share data

- Data shared through web interface
- To share data with CIMIS
- PCS must act as local single window for logistics to provide share of data on local level between port users and subsystems

What's next

- PCS could be applied in all port authorities with minor adjustments
- Decision and approval from Ministry of the Sea, Transport and Infrastructure is recommended
- There is an option to have one unified system which will share data with NSW and will be used on local level in all ports
- Architecture will be changed from Silverlight to HTML5
- Many integrations have already been done
- PCS system will cover all basic needs of port users without integration.
- One system to rule them all 😊

Port of Ploče Authority Port Community System

The project is co-funded by
the European Union,
Instrument for
Pre-Accession Assistance
